Aims of education Leading, through lectures, to understanding and grounding the basic concepts and concepts of intermolecular interactions in bioinorganic chemistry and to indicate the role they play in the chemical bases of selected biochemical processes.			
Course contents Theories of chemical bonds. Types of intermolecular interactions. The molecule and its surroundings. Intermolecular and intramolecular hydrogen bonds. Low energy intermolecular interactions in complex compounds. Factors influencing the strength of intermolecular interactions. Intermolecular interactions and physical properties. Theoretical and experimental evidence of the existence of hydrogen bonds. Elements of pharmacokinetics.
