The learning outcomes (for the field of study and		Knowledge	

specialization)	<ol style="list-style-type: none"> 1. Defines the basic laws in electroanalytical, spectroscopic and chromatographic methods. 2. Describes the construction and operation of the apparatus used in the above methods. 3. Selects the analytical method for a specific sample. 4. Explains the principles of sample preparation for analysis. 5. Explains the principles of analysis using various instrumental techniques. 6. Recognizes the limitations of using each method.
	Skills <ol style="list-style-type: none"> 1. Uses basic formulas to calculate the amount of analyte. 2. Carries out the measurement in accordance with the exercise instructions. 3. Interprets the results in qualitative and quantitative aspects along with their statistical processing. 4. Recognizes and operates the apparatus used in the analytical laboratory.
	Social competence <ol style="list-style-type: none"> 1. Is aware of the financial conditions of the selected instrumental method. 2. Demonstrates an active attitude in the face of an analytical problem. 3. Demonstrates the ability to critically assess the analysis and results obtained. 4.
