 FUNDUSZ SPOŁECZNY

<b>Course title</b>		<b>ECTS code</b>	
Quantum chemistry		13.3.1002	
<b>Name of unit administrating study</b>			
null			
<b>Studies</b>			
<b>faculty</b>	<b>field of study</b>	<b>type</b>	pierwszego stopnia
Wydział Chemii	Chemia	<b>form</b>	stacjonarne
		<b>specjalty</b>	chemia biomedyczna, chemia kosmetyków, analityka i diagnostyka chemiczna, chemia żywności
		<b>specialization</b>	wszystkie
<b>Teaching staff</b>			
prof. dr hab. Piotr Skurski; mgr Marzena Marchaj; dr Marcin Czaplą; dr hab. Iwona Anusiewicz, profesor uczelni; dr Jakub Brzeski; dr Sylwia Freza			
<b>Forms of classes, the realization and number of hours</b>		<b>ECTS credits</b>	
<b>Forms of classes</b>		5	
Auditorium classes, Lecture		classes - 60 h	
<b>The realization of activities</b>		tutorial classes – 20 h	
classroom instruction		student's own work – 45 h	
<b>Number of hours</b>		Total: 125 h - 5 ECTS	
Lecture: 30 hours, Auditorium classes: 30 hours			
<b>The academic cycle</b>			
2022/2023 summer semester			
<b>Type of course</b>		<b>Language of instruction</b>	
obligatory		polish	
<b>Teaching methods</b>		<b>Form and method of assessment and basic criteria for evaluation or examination requirements</b>	
- discussion - multimedia-based lecture - problem solving		<b>Final evaluation</b>	
		- Graded credit - Examination	
		<b>Assessment methods</b>	
		- (mid-term / end-term) test - oral exam	
		<b>The basic criteria for evaluation</b>	
		Passing written tests and evaluation during seminars throughout the semester. The attendance and active participation in seminars is obligatory. Passing the final oral exam (by answering open questions covering the issues presented during the lecture). The final exam may be taken only by students who passed earlier tests during the seminars.	
<b>Method of verifying required learning outcomes</b>			
<b>Required courses and introductory requirements</b>			
<b>A. Formal requirements</b>			
none			
<b>B. Prerequisites</b>			
basic knowledge concerning physics, linear algebra, infinitesimal and integral calculus			
<b>Aims of education</b>			
• acquainting students with the basics of quantum mechanics and quantum chemistry			

<ul style="list-style-type: none"> <li>acquainting students with the most important quantum chemistry methods allowing the prediction of their molecular structure, physicochemical properties, and reactivity.</li> </ul>	
<b>Course contents</b> <p>A. Lectures: wave-particle duality; Heisenberg's principle of uncertainty; mathematical formulations of quantum mechanics (postulates of quantum mechanics); solving Schrödinger equation for a free particle, particle in a box, rigid rotor, harmonic oscillator, tunneling effect, and hydrogen atom; spin angular momentum, atomic terms, Pauli exclusion principle, and LS coupling; Born-Oppenheimer and one-electron approximations, perturbational methods; variational methods; electron correlation; MO theory; approximate quantum chemistry methods (Hartree-Fock method, Configuration-Interaction method, Multi-configurational self-consistent field method, Complete Active Space self-consistent field method, Møller-Plesset perturbational method, Coupled-cluster method).</p> <p>B. Seminars: operators, eigenvectors and eigenvalues in Hilbert space, quantum numbers, orbitals, spin operators, symmetry of the wave-function, Slater determinants, evaluating electronic energy in Hartree-Fock method.</p>	
<b>Bibliography of literature</b> <p>Bibliography of literature Literature required to pass the course Either one of the following textbooks: Molecular Quantum Mechanics (P. Atkins, R. Friedman), An Introduction to Theoretical Chemistry (J. Simons), Quantum Mechanics in Chemistry (J. Simons, J. Nicols). Extracurricular readings Quantum Mechanics (A. Messiah), Ideas of Quantum Chemistry (L. Piela), Modern Quantum Chemistry (A. Szabo, N. Ostlund).</p>	
<b>The learning outcomes (for the field of study and specialization)</b>	<b>Knowledge</b> <p>After the course, the students are capable of: formulating the basics of quantum mechanics, explaining simple physical problems solved by quantum mechanics, identifying the symmetry of the wave-function, formulating Pauli exclusion principle and Hund rules, explaining the most fundamental approximations utilized in quantum chemistry, determining the multiplicity of a given molecular system, explaining the most important quantum chemistry methods.</p>
	<b>Skills</b> <p>After completing the course, the students are capable of: solving eigenproblems, predicting the possibility of accurate measuring certain observables, writing the proper single-determinant wave-function for a given configuration, calculating electronic energy in Hartree-Fock method, choosing the most suitable computational method for solving the Schrödinger equation for a given molecular system.</p>
	<b>Social competence</b> <p>After the course, the students are expected to understand the necessity of further learning, they are also taught to approach the problems and formulate their opinions with caution and criticism. In addition, the students are expected to remain open-minded for new ideas.</p>
